PROFESSIONAL SUMMARY

Aspiring Data Scientist with hands-on experience across the full ML pipeline — from data cleaning and EDA to model building, preprocessing, and deployment. Proficient in supervised and unsupervised machine learning algorithms, Python, Scikit-learn, Flask, SQL, and n8n workflow automation. Passionate about building data-driven solutions and automated pipelines that turn raw data into actionable insight.

TECHNICAL SKILLS

Python (Advanced)	Supervised Learning — Linear/Logistic Regression, Decision Trees, Random Forest, SVM, KNN, Gradient Boosting
Scikit-learn (Pipelines, ColumnTransformer)	Unsupervised Learning — K-Means, DBSCAN, PCA, Hierarchical Clustering
Pandas, NumPy	n8n — Workflow & AI Automation
SQL, MySQL, PL/SQL	Flask — Backend Web Development
Matplotlib, Seaborn	REST API Integration & Testing
Jupyter Notebook, VS Code, Git	Feature Engineering, Model Tuning & Evaluation

EXPERIENCE

Data Science Apprentice

Regex Software, Jaipur • Current

- Built and deployed supervised and unsupervised ML models covering regression, classification, clustering, and dimensionality reduction — integrated with Flask and MySQL.
- Performed EDA and feature engineering on real-world datasets using Pandas and NumPy.
- Designed preprocessing pipelines with ColumnTransformer, feature encoding, and Scikit-learn Pipelines.
- Developed and tested REST APIs for ML model serving.
- Automated workflows using n8n, connecting data sources, APIs, and notification systems.
- Wrote complex SQL and PL/SQL queries for data extraction and database interaction.

PROJECTS

Salary Prediction Web Application

Python • Flask • Scikit-learn • MySQL

- Built an end-to-end predictive web app applying supervised ML algorithms including regression and classification models.
- Applied ColumnTransformer and Pipelines for structured preprocessing and feature encoding.
- Developed a Flask backend integrated with MySQL for persistent data storage.
- Created an interactive UI for collecting user inputs and displaying salary predictions.

Exploratory Data Analysis Suite

Python • Pandas • NumPy • Matplotlib • Seaborn

- Conducted in-depth EDA on four real-world datasets: Titanic survival, restaurant tips, employee attrition, and supply chain analytics.
- Uncovered patterns in employee churn using correlation analysis and distribution plots.
- Identified supply chain bottlenecks and pricing trends through multi-variable visual analysis.
- Published notebooks on GitHub with clean, well-documented code and visualisations.

ML Preprocessing & API Pipeline

Python • Scikit-learn • REST APIs • Pandas

- Implemented a reusable preprocessing pipeline covering missing-value imputation, encoding, and feature scaling.
- Integrated Pandas with SQL databases to automate data ingestion and transformation.
- Tested ML model endpoints with REST API calls, validating request/response payloads.

n8n Automation Workflows

n8n · REST APIs · Webhooks

- Designed and deployed automated workflows in n8n connecting external APIs, webhooks, and data processors.
- Built trigger-based pipelines that reduced manual data handling tasks.

EDUCATION

Bachelor of Science (B.Sc.)

Rajasthan University, Rajasthan • 2022 – 2025

Relevant coursework: Mathematics, Statistics, Computer Applications

STRENGTHS

✓ Strong logical & analytical thinking	✓ Fast learner with curiosity for new technologies
✓ Good problem-solving & debugging skills	✓ Passion for ML, automation & data science
